

Shutdown Indication Behavior

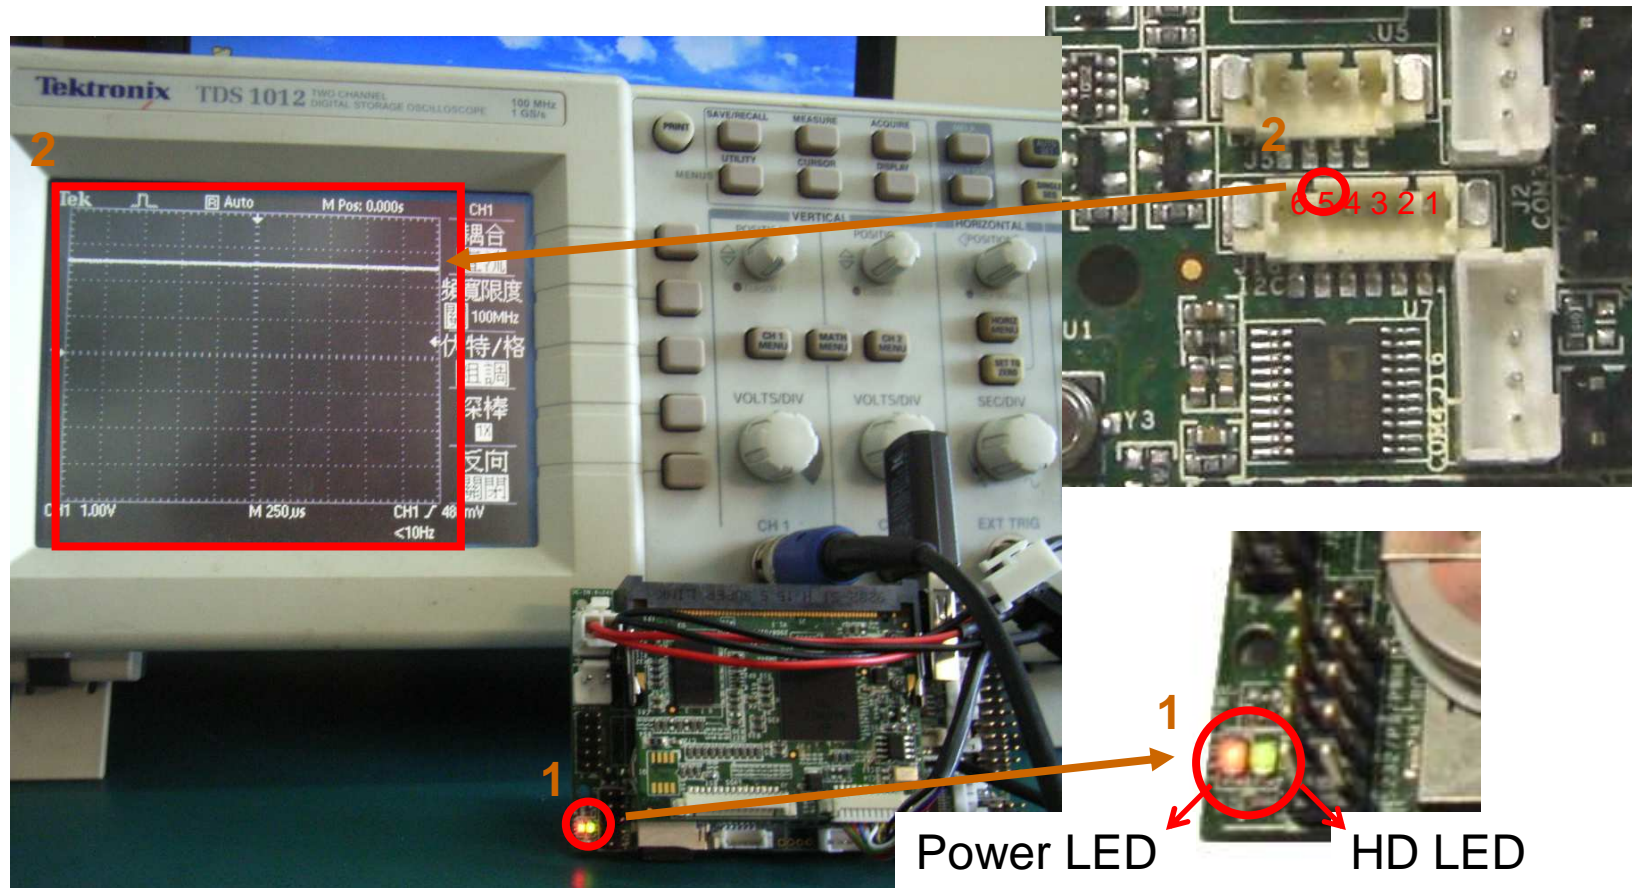

Shutdown Indication

- On RoBoard RB-110 with special BIOS, you should see the following behavior when WinXP/ Linux finishes the shutdown process.
 - The green HD LED will be extinguished.
 - The **~Reset** pin on I²C connector will be set to logic 0.
 - This feature can be used to power off RoBoard automatically.
- Note that for WinXP, you need to install “NT APM Support” to support the shutdown indication feature (see later slides).

Shutdown Indication

Before shutdown:

Shutdown Indication

After shutdown:

Note that after shutdown, WinXP will stop at the screen of "windows is shutting down..."
